Efficient Removal of Perchlorate with Lewatit® TP 106 Ion Exchange Resin

Lewatit® TP 106 is a new gel-type strong base anion exchange resin that is highly efficient for the removal of soft and toxic anions such as perchlorate (ClO$_4^-$), chlorate (ClO$_3^-$), bromate (BrO$_3^-$), and nitrate (NO$_3^-$). The special bead distribution of our new product development allows the resin to be operated at very high flow rates, which is crucial for surface water and groundwater treatment.

### Applications

Perchlorate is a toxic water contaminant and especially harmful to infants. Because of the interference with the human body’s ability to absorb iodine into the thyroid gland, perchlorate causes neurological damage. Groundwater is contaminated with perchlorate by military operations from missile fuel, fireworks, and fertilizer. As a result, California and Massachusetts set a preliminary maximum tolerated level of perchlorate for drinking water of 6 and 2 ppb, respectively. Because of its high solubility in water and its persistence in the environment, an efficient liquid purification technology is required to remove perchlorate.

### Benefits

- Up to 20% higher perchlorate removal capacities compared to competitor resins
- Long resin lifetime provides savings on capital investment costs
- High capacity up to 70 g/l even in presence of background constituents such as chloride and sulfate
- Legal requirements regarding discharge limits are fulfilled in a cost-efficient manner
- High perchlorate selectivity provides low leakage after operation and convenient disposal of the single-use resin
In order to face this challenge, LANXESS has developed the novel ion exchange resin Lewatit® TP 106, which enables our customers to generate virtually perchlorate-free water. Lewatit® TP 106 (red) can be operated 20% longer than the competitor resin (black) until the public health goal of 6 ppb is reached. As a result, customers need to replace ion exchange resin less frequently and achieve savings on investment costs.

**Figure 1:** Breakthrough curves depicting the concentration of perchlorate determined by ion chromatography in the effluent of the ion exchange column in dependence on the treated water volume.

![Breakthrough curves](image)

### Feed composition

- $[\text{ClO}_4^-] = 20$ ppm
- $[\text{SO}_4^{2-}] = 20$ ppm
- $[\text{CI}^-] = 20$ ppm
- $[\text{NO}_3^-] = 10$ ppm
- $\text{pH} = 7$

### Specific flow

$= 20$ BV/h

The perchlorate ($\text{ClO}_4^-$) contaminated drinking water enters the Lewatit® TP 106 filled ion exchange column. Due to the outstanding selectivity of Lewatit® TP 106, the perchlorate is removed exclusively. Other water constituents like sulfate ($\text{SO}_4^{2-}$) and chloride ($\text{Cl}^-$) are passed through the resin, which generates a highly efficient process and tasty drinking water.

**Figure 2:** Schematic representation of the perchlorate removal process.

**Certifications**

Lewatit® TP 106 is in compliance with the “NSF/ANSI Standard 61” for health-related implications of drinking water system components and certified by the Water Quality Association (WQA). For more information please visit www.wqa.org

Health and Safety Information: Appropriate literature has been assembled which provides information concerning the health and safety precautions that must be observed when handling the LANXESS products mentioned in this publication. For materials mentioned which are not LANXESS products, appropriate industrial hygiene and other safety precautions recommended by their manufacturers should be followed. Before working with any of these products, you must read and become familiar with the available information on their hazards, proper use and handling. This cannot be overemphasized. Information is available in several forms, e.g., material safety data sheets, product information and product labels. Consult your LANXESS representatives in Germany or contact the Health, Safety, Environment and Quality Department (HSEQ) of LANXESS Germany or - for business in the USA - the LANXESS Product Safety and Regulatory Affairs Department in Pittsburgh, PA.

Regulatory Compliance Information: Some of the end uses of the products described in this publication must comply with applicable regulations, such as the FDA, BPR, NSF, USADA, and CPSC. If you have any questions on the regulatory status of these products, contact your LANXESS Corporation representative, the LANXESS Regulatory Affairs Manager in Pittsburgh, PA or the Health, Safety, Environment and Quality Department (HSEQ) of LANXESS Deutschland GmbH in Germany. The manner in which you use and the purpose to which you put and utilize our products, technical assistance and information (whether verbal, written or by way of production evaluations), including any suggested formulations and recommendations are beyond our control. Therefore, it is imperative that you test our products, technical assistance and information to determine to your own satisfaction whether they are suitable for your intended uses and applications. This application-specific analysis must at least include testing to determine suitability from a technical as well as health, safety, and environmental standpoint. Such testing has not necessarily been done by us. Unless we otherwise agree in writing, all products are sold strictly pursuant to the terms of our standard conditions of sale. All information and technical assistance is given without warranty or guarantee and is subject to change without notice. It is expressly understood and agreed that you assume and hereby expressly release us from all liability, in tort, contract or otherwise, incurred in connection with the use of our products, technical assistance, and information. Any statement or recommendation not contained herein is unauthorized and shall not bind us. Nothing herein shall be construed as a recommendation to use any product in conflict with patents covering any material or its use. No license is implied or in fact granted under the claims of any patent.
