- **Browser-based calculation tool for planning ion exchange systems**
- **Future-oriented alternative to desktop solution**
- **Pre-release version to be presented at Aquatech**

Cologne, March 5, 2025 – LANXESS is presenting an online version of its LewaPlus design software for planning and dimensioning ion exchange systems for the first time at Aquatech in Amsterdam. The company is thus introducing a cloud-based solution to complement the existing desktop version. This preliminary version is initially to be used for the calculation of water demineralization. Further modules will follow. As before, LANXESS offers the software free of charge.

Advantages for customers and users

“We plan to provide LewaPlus users with an online version of our calculation tool in the future,” says Dr. Stefan Neufeind, Head of Business Development and Applications at the LANXESS Liquid Purification Technologies (LPT) business unit. “Users will then be able to access the program via the internet. Installation on local computers is not necessary. Of course, all common browsers are supported.” This also enables access with any end device, such as tablet computers or smartphones. The scope of services also provides an export function that allows users to download the results for their own documentation and data storage.

LewaPlus: Calculation and design software

The LewaPlus design software enables the planning and dimensioning of ion exchange systems, including individual processes and simulations. Users can calculate a wide range of system configurations that enable flexible use in the water treatment and food and beverage industries. With the goal of creating processes that are as sustainable as possible, LewaPlus helps to identify the ideal system configuration to enhance productivity and conserve chemicals and water.

Detailed information about LewaPlus and LPT products and services is available at https://lanxess.com/en/products-and-brands/brands/lewatit.
