

CONTROL

Keep your manufacturing lines clean!

The oxidizer **Preventol® OX** can be used for disinfection, to support hygiene measures. It controls the production water and cleans the installation. On top, curative treatment of spoiled intermediates or end-products can be achieved with **Bioban® DB 20**.

Table 1: Microbial control biocide selection guide

Product Name	Active Ingredient	Features & Benefits
Bioban® DB 20	DBNPA	<ul style="list-style-type: none"> ■ Quick kill biocide for rapid decontamination ■ Use for decontamination of raw materials and long-term preservative enhancement
Preventol® OX	KMPS	<ul style="list-style-type: none"> ■ Fast oxidizing action ■ Suitable to disinfect the production line and recover wash water

DETECT

Increase product safety with Rapid Detection

Our technical experts can help determine the cause of contamination with microbial audits of manufacturing facilities. These audits, coupled with industrial hygiene good practices, will help decrease costly shutdowns and production delays.

On top, we recommend to use the 2nd generation ATP Technology from our partner Tennants for on-site support. It allows you to monitor the real-time microorganism content of complex samples.

PREVENT

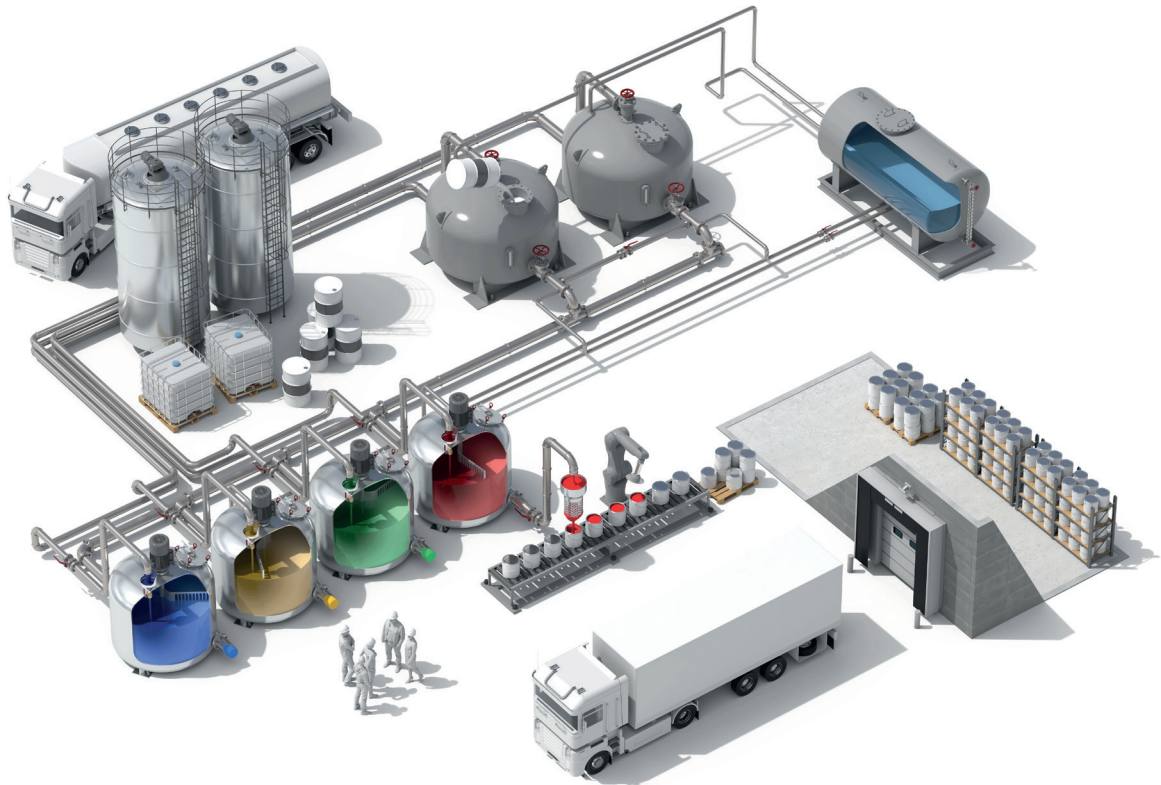

Safe and sustainable antimicrobial products

Are you looking for well-known products with proven performance from one of the world's largest supplier of microbial control products for paints and coatings? Have a look at our broad biocide portfolio, which offers you the right solution for any problem.

Controlling microorganisms in paints and coatings helps increase efficiency and deliver a better end-use product. It also helps employees and consumers avoid contact with microorganisms.

Steps of a Paint Production

Plant Hygiene is important in every step of the paint production.
